

Hello;

Universities are education / training and research institutions that bring up qualified manpower for the society, produce information, increase and disseminate the produced information and enable it to turn into a product or service useful for the society. As **Iskenderun Technical University**, our main goal is to be a 'unique' university that prioritizes innovation and entrepreneurship and focuses on technology by creating an original education / training and research model. In line with this goal, we want to create a project-oriented "ecosystem" in which individuals who follow the technology, do not only consume it, but also produce it, never lose their excitement, and have high self-confidence with opportunities to develop themselves and in which everyone can know and discover their potential. Working within the framework of "University-Industry-Public-Society" quadruple and social innovation model on an ongoing basis; we intend to create permanent solutions for the local, national and universal problems. We want to invest in "human"... Maybe we're a novice, but we have our excitement... With this excitement, we are waiting for everyone who is looking for and wanting to discover their potential and who is dreaming of a "university" at **Iskenderun Technical University** in order to "achieve together". We promise! We will always be a university that seeks the right, the good, the beautiful and the latest, and, of course, will find them all.

With my warmest regards...

Prof. Dr. Türkay DERELI
Rector
